

COMPANY OVERVIEW

A trusted leader in video distribution systems, **Z-Band Technologies** provides tailored solutions for the unique needs of corporate facilities. With over two decades of experience and a nationwide footprint, **Z-Band** is committed to helping enhance the employee and staff experience through reliable, scalable, and user-friendly technology.

CORE SOLUTIONS

Z-Band enables corporate facilities to deliver news, information, and internal content that helps both employees and visitors in their day-to-day tasks. **Z-TV**, our patented hub and balun system, eliminates the need for outdated coax by distributing content over existing category cable, while our **Z-IP** system uses the latest in IPTV technology to give you even more control over what content can be viewed based on location, time of day, or department.

Our solutions not only provide centralized control of video, digital signage, and messaging across the facility, but allow IT managers to drastically minimize potential downtime and the need for on-site service with the ability to remotely monitor and diagnose potential issues.

Desktop viewing, visitor information, news, way-finding and signage, customized content, and emergency alert integrations. All of this on a platform that provides your facility with a unified infrastructure. Communicate clearly and consistently with employees and visitors for a more connected and responsive workplace environment.

WHY Z-BAND?

- Trusted Fortune 500 partner
